SIX-MONTHLY INDEXES TO SCIENCE ABSTRACTS

Cumulative indexes to Science Abstracts are published twice a year covering the period January-June and July-December. They comprise author and subject indexes and some specialised or 'small' indexes. For Physics Abstracts and Electrical & Electronic Abstracts the Author Index and Subject Index are published as separate volumes. In this case the small indexes are included in the Author Index volume.

Cumulative Author and Subject Indexes for preceding years are also available. For details please see inside back cover.

Subject Index

The Subject Index provides an alphabetical subject key to the articles included in the abstracts journal. Some general guidance on its use is given below:

1. Look in the index for the name of the specific subject in which you are interested. In most cases this name will be a heading in the index and you will find relevant articles listed under it. The majority of the subject headings fall into the following categories: property, phenomena, substance or named objects, instrument, device, theory, method, process, application, event.
2. Occasionally you will be directed from the subject heading chosen to a different heading under which the relevant or additional articles are listed.
3. If you do not find the subject heading you first chose, try a more general heading.
4. Each entry under the heading relates to an article appearing in the abstracts journal and gives the serial number of that article in the journal preceded by the last digit of the current year, e.g. 3 - 12345; i.e. Abstracts number 12345 in the abstracts journal of 1983.

The language of the article, if it is not in English, is also indicated, e.g. microchannel plate develop. (Japanese) 3 - 29769.

Each entry starts with a Keyword or Keyphrase considered to be most relevant to the heading. On sorting these Keywords, the qualifying prefixes are usually ignored (e.g. n-Ge is sorted under Ge).

There are four main Keyword lists; numerical 1-9, alphabetical A-Z, elementary particles, and chemical symbols (organic substances are written and not given as chemical formulae). More than one Keyword list may be present under each subject heading.

Usually more than one access point is provided for each document. For documents on, say, 'Coupling of optical data collection lines', three access points are provided. Under the heading 'optical fibres' and 'optical couplers', the Keyphrase will be 'data collection line' and under the heading 'cable jointing' the Keyword will be 'optical'.

Abbreviations and Acronyms

Abbreviations and acronyms are used in the modifiers in all INSPEC Cumulative Subject Indexes. Individual terms should be readily understood in the context of the subject headings. **Inorganic substances** are usually given by their chemical formulae. Iron and aluminium garnets appear in the formulae lists as MIG and MAG (where M is metal element, e.g. YIG and YAG); $(\text{Pb,L a})(\text{Zr,Ti})\text{O}_3$, $\text{Pb}(\text{Zr,Ti})\text{O}_3$ and $\text{Ce}_2\text{Mg}_3(\text{NO}_3)_{12}$ appear as PLZT, PZT and CMN respectively. **Organic substances** including **liquid crystals** are not given as formulae but common abbreviations are used.
